

The *REGEN* Regenerative Media Filter

Filter Technology has more experience with Flex Tube Filtration than anyone in the world. We manufacture high performance filtration systems for almost any application where fine filtration is required. Our filters range from small 30 GPM filters to large 3000 GPM central systems.

Self-Cleaning Filter Elements - without the need for backwashing or back-flushing.

1/2 Micron Clarity - Improve your product quality by full filtration. Obtain a finer finish and tighter tolerances on your parts by operating with oil that cleaner than like new or better. Your work and the machines will stay cleaner.

Regenerative Filtration - We have developed a very unique Automatic Regeneration Cycle that allows for the maximum use of the filter precoat multiple times before it is completely spent. This means longer filter cycles, reduced maintenance and less downtime.

Dry Sludge - Easy sludge disposal. Air pressure is used to separate the fluid from the sludge. The fluid is returned to the tank while the dried sludge remains in the removable pot for a clean and quick disposal.

Applications

Machine Tool Coolants - Oil or water based

Grinding - Flute grinding, cutter tool grinding, solid carbide grinding, centerless, thread.

EDM - EDM oil, EDT (texturing) ECM

Biodiesel - EN & ASTM Cold Soak Test (CSFT)

Distillery Products - Spirits, vodka, whiskey

Water - Potable, industrial, wastewater, commercial swimming pools & water parks

Solutions for Industry

Our filters offer the highest clarity, performance and cost effectiveness of any available on the market today
