

The O³ FATBOY

Tramp Oil Separator with BDO

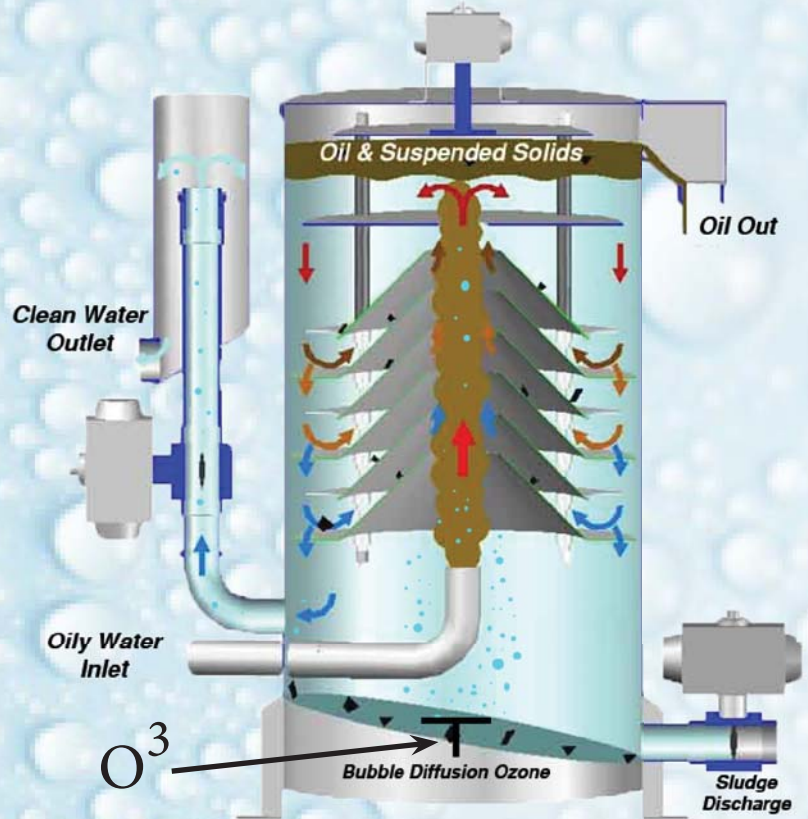

Bubble Diffused Ozone

Ozone (O³) is highly toxic to all microbes from bacteria to molds and viruses at a very low dosage rate.

The Ozone breaks down to form oxygen which keeps anaerobic bacteria counts low. Ozone also improves filtration by creating micro-particle flocculation.

Filter Technology has developed innovative equipment to treat fluids in a safe & efficient manner leading to a safer workplace while reducing disposal cost.

At 70 °F bacteria will double in 60 minutes. Within a short time the entire volume of fluid can be saturated with harmful bacteria and fungus not only destroying the fluid properties. Upon surface contact with the bacteria Ozone will penetrate the cell wall causing *Cell Lysing* destroying the bacteria completely.

BDO Creates a Safer & Healthier Workplace

Better Sanitation

Complete disinfection on contact with O³

Eliminates Odors

Prevent fluids becoming rancid cause odors.

Saves money

Reduces or eliminates chemical use
Greatly extends sump life of fluids
Reduce costly disposal cost

Eliminate

Respiratory Illness
Dermatitis & Irritation
Hazardous Biocide Additives

Control & Stop Bacteria Growth

Mycobacteria & Fungus
Legionella pneumophila
